

## core::vector

```
template <class T, class Allocator = allocator<T> > class vector;
```

### Member types

member type	definition	notes
value_type	The first template parameter (T)	
allocator_type	The second template parameter (Allocator)	defaults to: allocator<T>
scalar_type	scalar<T, Allocator>	
const_scalar_type	const scalar_type	
reference	value_type&	
const_reference	const value_type&	
pointer	value_type*	
const_pointer	const value_type*	
iterator	a bidirectional iterator to value_type	convertible to: const_iterator
const_iterator	a bidirectional iterator to const value_type	
reverse_iterator	a bidirectional reverse iterator to value_type	
const_reverse_iterator	a bidirectional reverse iterator to const value_type	
size_type	an unsigned integral type that can represent any non-negative value of difference_type	usually the same as size_t
difference_type	a signed integral type	usually the same as ptrdiff_t

### Member functions

(constructor)	Construct vector (public member function)
(destructor)	Vector destructor (public member function)

<code>operator=</code>	Assign content (public member function)
------------------------	---

### Iterators:

<code>begin</code>	Return iterator to beginning (public member function)
<code>end</code>	Return iterator to end (public member function)
<code>rbegin</code>	Return reverse_iterator to reverse beginning (public member function)
<code>rend</code>	Return reverse_iterator to reverse end (public member function)
<code>cbegin</code>	Return const_iterator to beginning (public member function)
<code>cend</code>	Return const_iterator to end (public member function)
<code>crbegin</code>	Return const_reverse_iterator to reverse beginning (public member function)
<code>crend</code>	Return const_reverse_iterator to reverse end (public member function)

### Capacity:

<code>empty</code>	Test whether container is empty (public member function)
<code>dimension</code>	Return dimension (public member function)
<code>length</code>	Return length (public member function)
<code>size</code>	Return size (public member function)
<code>max_size</code>	Return maximum size (public member function)

### Element access:

<code>operator[]</code>	Access element (public member function)
<code>at</code>	Access element (public member function)
<code>data</code>	Access data (public member function)

### Modifiers:

<code>assign</code>	Assign a new vector (public member function)
<code>create</code>	Create a vector without copying the data (public member function)
<code>fill</code>	Fill vector with specified value (public member function)

<a href="#">linear_fill</a>	Fill vector with linear gradient values ( <a href="#">public member function</a> )
<a href="#">value</a>	Set vector elements with specified value ( <a href="#">public member function</a> )
<a href="#">linear_value</a>	Set vector elements with linear gradient values ( <a href="#">public member function</a> )
<a href="#">generate</a>	Generate values for vector with function ( <a href="#">public member function</a> )
<a href="#">remap</a>	Map source data to a vector ( <a href="#">public member function</a> )
<a href="#">reshape</a>	Changes the shape of the vector without copying the data ( <a href="#">public member function</a> )
<a href="#">swap</a>	Swap content ( <a href="#">public member function</a> )
<a href="#">clear</a>	Clear content ( <a href="#">public member function</a> )

### Operations:

<a href="#">operator+=</a>	Add a value or vector ( <a href="#">public member function</a> )
<a href="#">operator-=</a>	Subtract a value or vector ( <a href="#">public member function</a> )
<a href="#">operator*=</a>	Multiply a value or vector ( <a href="#">public member function</a> )
<a href="#">operator/=</a>	Divided by a value or vector ( <a href="#">public member function</a> )
<a href="#">operator&amp;=</a>	And a value or vector ( <a href="#">public member function</a> )
<a href="#">operator^=</a>	Xor a value or vector ( <a href="#">public member function</a> )
<a href="#">operator =</a>	Or a value or vector ( <a href="#">public member function</a> )

### Observers:

<a href="#">get_allocator</a>	Get allocator ( <a href="#">public member function</a> )
-------------------------------	--

### Non-member function overloads:

<a href="#">operator+</a>	Vector addition ( <a href="#">public member function</a> )
<a href="#">operator-</a>	Vector subtraction ( <a href="#">public member function</a> )
<a href="#">operator*</a>	Vector multiplication ( <a href="#">public member function</a> )
<a href="#">operator/</a>	Vector division ( <a href="#">public member function</a> )
<a href="#">operator&amp;</a>	Vector and ( <a href="#">public member function</a> )

operator^	Vector xor (public member function)
operator	Vector or (public member function)
operator<	Vector less than (public member function)
operator>	Vector greater than (public member function)
operator<=	Vector less than or equal to (public member function)
operator>=	Vector greater than or equal to (public member function)
operator==	Vector equal to (public member function)
operator!=	Vector not equal to (public member function)
